Experience

QTS Software Developer Co-Op *May 2024 – August 2024*
RBC Capital Markets *Toronto, ON*

- Currently working full-stack on the Global Investment Banking platform, integrating **AngularJS and React** front-end with **C#** back-end.
- Using the **MUI and AG Grid** frameworks with query logic in **C#** in order to create a data visualization model to track and store noteworthy oil and gas sales from the **Enverus API**.

Application / Software Developer Co-Op *January 2024 – April 2024*
Canadian Imperial Bank of Commerce (CIBC) *Toronto, ON*

- Worked as part of the CIBC EDE Team on **automation** of internal DevOps tools like **Jira, Confluence, GitHub, Artifactory, and Jenkins**
- **Migrating and modernizing** ALM request forms from a heavy maintenance custom webserver to a standardized system on the internal Jira Service Desk
- Implemented full team, user, and project sorting for the Github audit automation system using **Javascript and GraphQL** and **designed UI elements** for the .CSV outputs.

Application Production Analyst Co-op *May 2023 – August 2023*
Canadian Imperial Bank of Commerce (CIBC) *Toronto, ON*

- Recognized with the **Exceptional Student Award** for consistently surpassing co-op expectations
- Created a Github **automation project** using **JavaScript and GraphQL** to query the **Github API**, annually compiling user permissions for auditing purposes to save user time collecting permissions manually
- Refactored and redesigned **HTML/CSS** for email formatting of an internal incident reporting project, **unifying design language** across all email types
- Wrote project application **design documents** that were presented to senior developers to align technical design

Projects

Pocket Park — *Figma, MongoDB, Express, React, Node.js*

- Won 1st Prize at Climate Code 2021
- Created a webapp using **HTML, JavaScript, and CSS** to gamify cleaning up parks by connecting virtual parks with corresponding local parks, facilitating **user engagement** in litter cleanup initiatives
- Implemented reward system based on cosmetic upgrades stored on **MongoDB** to virtual parks

SAGrader — *Tensorflow, Keras, GloVe, gensim, NumPy, Django*

- Won Best Project at Ignition Hacks on a team of 4 people
- Built an **artificial intelligence** essay grader with **semantic similarity** and spelling/grammar functionality
- Used **Tensorflow and Keras** to build the model, with additional optimization using **GloVe**
- Implemented front-end website using **Django framework**

Snail's Pace — *Unity, Google ARCore, AR+GPS Location*

- Created an Android AR fitness game as a team of 3 using the **Unity engine**, which encourages players to keep active by **chasing them with a virtual snail**
- Implemented smooth **AR object movement** using the AR+GPS Location Unity package and **ARCore API**
- Used **C#** logic to implement the main menu and game setting selection

Programming Skills

Languages: Python, JavaScript, C#, HTML/CSS, Java, C, C++, R
Frameworks: GraphQL, Django, React, Express, Node.js, Jenkins
Developer Tools: Visual Studio Code, Git, Figma, Unity, Android Studio, Godot, IntelliJ

Education

University of Waterloo 2022 – Present
Candidate for Honors Bachelor of Computer Science (Co-op) *Waterloo, ON*
